What was it that inspired your aesthetic clinic?

I owned a beauty salon previously and waxing was one of the most popular treatments. This made me realise just how much hair can cause many issues for people and often knock their confidence. I wanted to offer a more long-term solution to my clients so I decided to invest in a Laser and IPL system.

What Lynton equipment do you use at your clinics?

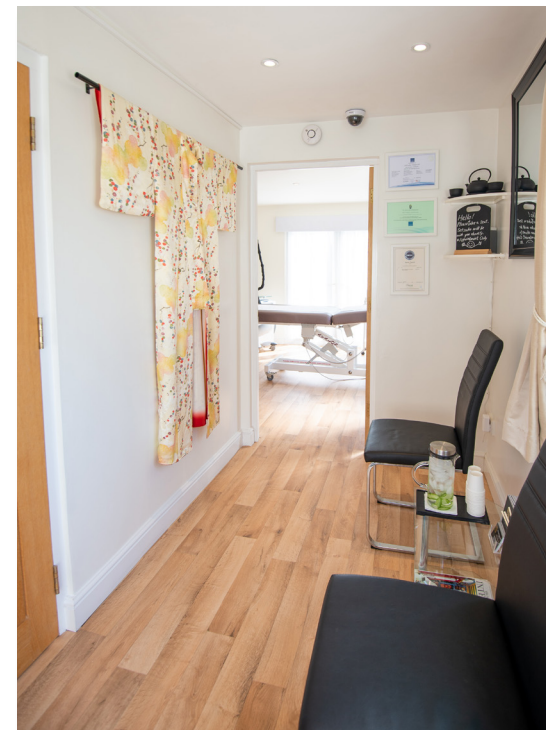

I firstly purchased the EXCELIGHT® IPL system from Lynton and I am currently using the Motus AY pain-free Alexandrite laser hair removal system. I really love both machines.

And are you happy with the clinical results you see?

Definitely. The machines have made many of my clients very happy.

Why did you choose Lynton as your aesthetic technology supplier?

I searched through many other manufacturers before selecting Lynton. Lynton came in first for the best customer care. Their response is quick and efficient. The trainers are extremely knowledgeable, and their training is so inspiring.

What advice would you give to a clinic considering laser or IPL?

I would advise them to invest in training to expand their knowledge. Basic qualifications are only basic after all. Lynton provides various advanced training programmes.
